

USER'S INSTRUCTION

THANKS FOR PURCHASING OUR TRAMPOLINE TIE DOWN KIT.

This set is designed to be used on any round or rectangular trampolines. It has two basic purpose that will ensure the owner to move the trampoline without the vertical leg pieces separating from the frame. And will help to root your trampoline into ground with its auger stakes. (Differing soil conditions and weather conditions could influence the function of any installation using that kit)

Contents:

Tie down straps --- 2pcs

Auger stakes --- 2pcs

If you find some parts missing please contact your distributor.

Attention before installation:

Make sure there are no underground utilities (electrical, gas, phone, water and sprinkler) before installing the auger stakes, and this kit should be installed by an adult.

Straps

Each tie down strap consists of two loop straps that are joined with steel toothed buckle. The large loop goes around the top frame and the foot of leg and does not allow the legs to drop down or separate when the trampoline is moved or used. (tie the leg to the top frame)

The small loop goes through the auger stake "ring" and fix the trampoline to the ground with auger stakes (see image below)

Buckles

The end of each loop strap is threaded through the buckle as shown. The strap comes "up" through the non-"toothed" opening and back through the "toothed" opening. The sliding piece on the buckle applies or release tension on the strap end.

— Leg Tie Down --- Circular Trampolines

At each leg of the trampoline run the large loop strap around the top frame and foot of leg, Put the strap end through the buckles and "cinch" the piece together by tightening the strap. (see the image below)

Trampoline tie down

Select a suitable position near each foot and rotate the auger stakes into the ground to fix the auger stakes with the ground, it may be necessary to use a straight tool such as a screw driver that placed through the stake "eye" and forming a "T" handle to assist in rotating the stakes after installing the auger stakes, put the end of small loop of straps through the stake's "eye" and buckle and clinch the piece together as mentioned method above.

Rectangular and other trampolines

This kit also can be used as a four point trampoline tie down system on most other trampoline. That you can tie down the frame to the ground directly. If so please put the large loop straps go through the top frame close to the leg position (maybe near a welding socket). The length of the straps can be adjusted using the buckle in the large loop. And small loop and auger stakes are installed as methods mentioned above. Make sure all straps and auger stakes are tight and secure.
